

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) A unitary absorbent structure, comprising:  
an upper fibrous layer having a liquid acquisition zone extending to one surface and a liquid distribution zone extending to another surface, the acquisition zone comprising fibers and a binder resin;  
a lower fibrous liquid storage layer in liquid communication with the liquid distribution zone surface of said upper fibrous layer, said storage layer including superabsorbent polymer particles;  
and  
a containment layer surrounding the storage layer and extending to outer edges of said structure, said containment layer containing fibers and superabsorbent polymer particles of said storage layer against a distribution zone surface of the upper layer, and wherein the containment layer is sealed to at least one edge of said upper fibrous layer.
2. (Original) The structure of claim 1 wherein said upper fibrous layer is airlaid and the acquisition zone has a lower density than the distribution zone.
3. (Previously Presented) The structure of claim 1 wherein said lower storage layer is an airfelt layer.
4. (Cancelled).
5. (Previously Presented) The structure of claim 1 wherein said containment layer is sealed directly to the distribution zone surface of said upper fibrous layer.
6. (Previously Presented) The structure of claim 1 wherein said containment layer is sealed directly to the storage layer.

7. (Original) The structure of claim 1 wherein said containment layer is selected from the group consisting of thermoplastic film, nonwoven and woven tissue.

8. (Previously Presented) The structure of claim 1 wherein said containment layer comprises thermoplastic film selected from the group consisting of polyethylene and polypropylene.

9. (Original) The structure of claim 3 wherein said airfelt layer is lightly bonded.
